

View Wall Interface

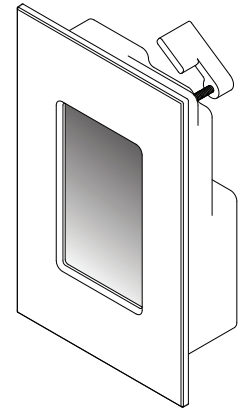

Description

The View Wall Interface is a compact wall-mounted interface for adjusting and monitoring tint levels of View Dynamic Glass. The product utilizes 802.11-based Wi-Fi technology for connectivity and an advanced user interface to provide a powerful solution with a modernized look and feel.

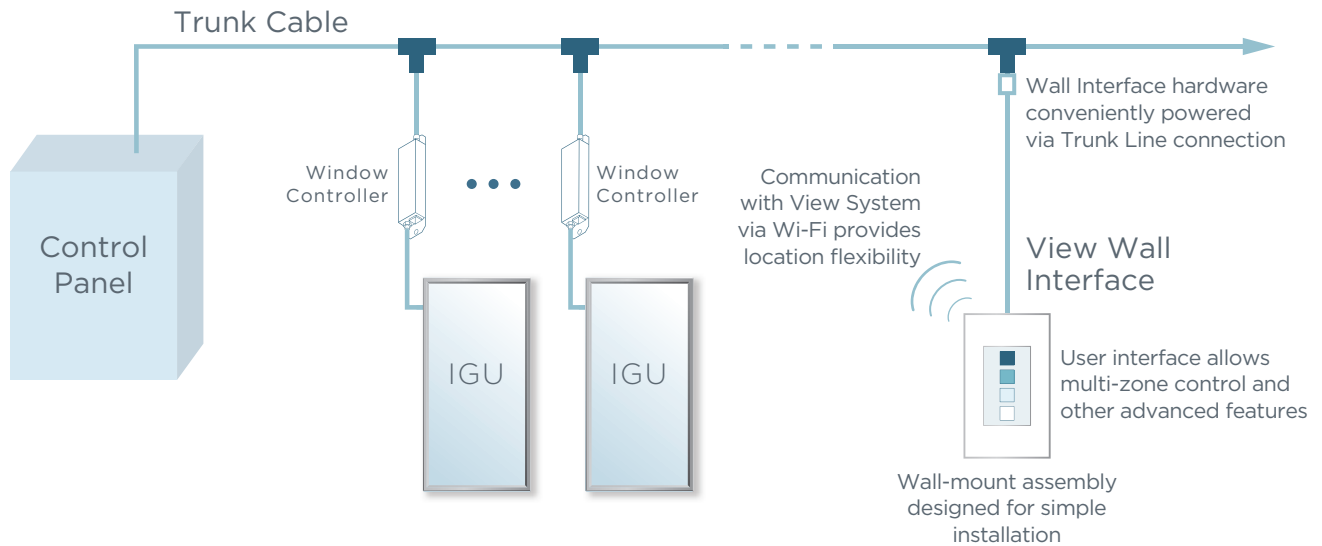

Features

Software-based solution provides more flexibility than a traditional hardware-based wall switch.

- Capable of monitoring and controlling tint levels for multiple zones with a single device
- Tint Control Lockout mode helps to prevent unintended tint overrides
